

PRESS RELEASE

Hyprevention® receives **CE Mark approval for Y-STRUT®**, an implantable medical device designed to prevent hip fracture. Hyprevention® is **now ready for commercial deployment in Europe**.

About Y-STRUT®

Y-STRUT® is an implantable medical device indicated to **prevent fractures of the proximal femur**. It is intended to be used in two **clinical indications**:

- **Traumatology**, for contralateral percutaneous internal fixation of proximal femur, in patient with a low energy pertrochanteric fracture on the first side,
- **Oncology**, for percutaneous internal fixation for impending pathological fracture of proximal femur. Act of last resort (ultima ratio).

Y-STRUT® is implanted thanks to a **minimally invasive procedure** by an orthopedic surgeon or an interventional radiologist.

14 patients already successfully benefited from **Y-STRUT®** technology in the clinical trials jointly conducted at the University Hospital of Bordeaux, the Gustave Roussy Institute in Paris and at the University Hospital Brugmann in Brussels.

Y-STRUT® development was supported by BPIFrance and the Regional Council of Aquitaine.

About Hyprevention®

Founded in 2010 by Cécile Vienney (CEO) and 3 orthopedic surgeons, Hyprevention is a French company that develops, manufactures and sells implantable medical devices to address unmet clinical needs. It is certified ISO 13485: 2003 since January 2014, and CMDCAS since January 2015.
